

- Added show "Edit with ShareX" button in Windows Explorer context menu option to "Application settings window -> Integration tab"
- Added support to escape custom uploader argument and header patterns with `\`
- Support referrer and user-agent headers in custom uploaders
- Added [Cloudflare DNS](#) to DNS changer tool
- Added [Firebase](#) Dynamic Links URL shortener  matthewburnett
- Added [YouTube](#) file uploader  SupSuper
 - Tip: There is no specific destination type for videos but you can use uploader filters to force files with video extensions to upload to desired destinations
- Added [Google Cloud Storage](#) file uploader  matthewburnett
- Updated [OneDrive](#) uploader to [Microsoft Graph API](#), this change allows using OneDrive for Business and uploading higher size files  SupSuper
 - Note: If you were using OneDrive destination, you need to re-authenticate
- Added [Wasabi](#) endpoint to Amazon S3 endpoints list
- Added [Azure Storage](#) custom upload path support  Lego6245
- Added [Azure Storage \\$root container](#) support  Lego6245
- Container name won't be appended to [Azure Storage](#) custom domain automatically anymore, can be added manually to custom domain section if needed
- Removed auto container creation from [Azure Storage](#) upload to decrease upload time
- Added URL preview to [Azure Storage](#) tab to make configuring easier
- Removed [GitHub gist](#) anonymous upload support because it is **deprecated**
- Removed [Google URL shortener](#) because it is **deprecated**
- Removed Dropfile, Pastee and CoinURL
- Added after capture task "Scan QR code" (requires image to be saved as file)
- Added "Ask for confirmation when aborting screen recording" option  stuntguy3000
- Added upload image button to image effects window
- Added selective color image effect which allows making two color images
- Added color option to canvas image effect
- Added sides option to auto crop image effect
- High DPI improvements for UI  SupSuper
- When ShareX is updating, setup will be run with `/UPDATE` parameter which makes sure that the setup will not apply initial tasks again such as creating desktop shortcut or context menu entries  sylveon
- Added option to replace non-unreserved characters by underscores  sylveon
- If pre-release updates checkbox is checked then dev build install button will show up
- Added upload file and edit image context menu buttons to history and image history windows
- Added hotkey repeat limit option (Application settings -> Advanced tab)

ShareX 12.1.1 - 2018-03-25

- Bug fixes

ShareX 12.1.0 - 2018-03-19

- Upgraded .NET Framework version to 4.6.2. Because of this upgrade **Windows XP and Windows Vista is not supported** anymore. If you don't have .NET Framework 4.5 or higher is installed, ShareX auto updater will not be able to show new update because we are using GitHub API to check for updates and they require **TLS 1.2** now which is not supported with .NET Framework 4.0. For detailed information [click here](#)
- We now have a vanity Discord invite link: <https://discord.gg/ShareX>
- Added image editor autosize start mode, which will resize the window to fit the image. If the image is too big then window will be maximised
- Added sticker tool
- Added [Blob Emoji](#) sticker pack

- Added these buttons to image editor, image menu
 - New image (Creates empty canvas)
 - Open image file
 - Insert image file
 - Insert image from screen
 - Crop image
 - Auto crop image (Removes same color sections from edges)
 - Add image effects (Allows you to apply various effects to whole image)
- Added paste image/text button to image editor, edit menu
- Added visual scroll bars for panning  L1Q
- Added resampling option to image size dialog
- Added "Font size" option to step tool
- Added "Use letters" option to step tool
- Added confirm and cancel buttons to image editor crop tool, which will allow moving or resizing crop region before confirming
- Show area info text in crop tool
- Added image interpolation mode option to "Image (File)" and "Image (Screen)" tools
- Added "Drop shadow color" option
- Added "Auto close editor on task" option, for example if you click "Upload image" on image editor toolbar then editor will close automatically if this option is enabled
- In image editor paste `ctrl` + `v` also gonna check for image files addition to image
- Holding `ctrl` while using sticker tool will use last sticker instead of opening sticker picker
- Holding `ctrl` while using image file tool will use last image file instead of opening file dialog
- Added image editor startup dialog when editor is opened from tools menu
- Removed Greenshot image editor
- Using authorization header authentication for [Amazon S3](#) now instead of presigned URL, this change allows to support [DigitalOcean Spaces](#)
- Added new Amazon S3 regions: China (Ningxia), EU (Paris)
- Added [DigitalOcean Spaces](#) Amsterdam, New York and Singapore endpoints to Amazon S3 regions list
- Allow to disable public-read [ACL](#) on files uploaded via Amazon S3  sylveon
- Added [random domain syntax](#) support for Amazon S3  sylveon
- Added option to remove file extensions on Amazon S3 uploads  sylveon
- If [JPEG](#) image contains orientation [metadata](#) then the image will be rotated automatically
- Added "Show cursor" quick setting to main window and tray capture menu
- Added auto crop to image effects window
- Added size mode option to image watermark effect  RedMser
- In destinations menu, unauthorized uploaders will be shown as red. If user tries to upload to any of these destinations then destination settings window with selected uploader tab will be opened automatically
- Added decode button to [QR code](#) encode picture box right click menu
- Renamed "ownCloud" to "ownCloud / Nextcloud" to make it clear [Nextcloud](#) is supported
- OwnCloud / NextCloud direct link option gonna use `/preview` link now instead of `/download`
- Added random adjective `%adjective` and animal name `%animal` pattern for file naming similar to Gfycat naming which is: `%adjective%adjective%animal`
- Added random line from a file `%rf{filepath}` pattern for file naming  AtlasTheBot
- Added `$filename$` pattern for custom uploader arguments, it is only usable when custom uploader type is image, text or file
- Support name patterns in custom uploader headers
- Support escaping custom uploader URL syntax with `\` character  ArsenArsen
- Added [markdown](#) copying options to also history window  stuntguy3000
- Update [recorder devices](#) to latest version
- Added Google Translate button to [OCR](#) window  9joao6

- Added upload image and decode buttons to **QR code** window context menu
- Make **QR code** input textbox multi line
- Use **UTF-8** for **QR code** encoding and restrict length to **2952 bytes**
- Make sure **QR code** output is square image
- Using **FluentFTP** library now for FTP/FTPS uploads instead of deprecated System.Net.FtpClient library
- Added `/NORUN` parameter support to ShareX setup which can be used together with `/SILENT` `OR` `/VERYSILENT` to install ShareX silently without run it afterwards
- Because of .NET Framework update now we can use built in Zip functions and no need to use **7-Zip** library anymore, because of this change importing backups (.sxb files) from previous ShareX versions not gonna work because those were exported using 7z compression but you can extract them manually to `Documents/ShareX` folder yourself
- Added .sxcu file association to Windows Store build  sylveon

ShareX 12.0.0 - 2017-11-27

- Added windowed mode support to image editor
- Added panning support to image editor, hold middle mouse button to pan canvas  L1Q
- Added real time image effect (blur, pixelate, highlight) preview support to image editor
- Added "Image" menu to image editor toolbar with these items:
 - Image size
 - Canvas size
 - Rotate 90° clockwise
 - Rotate 90° counter clockwise
 - Rotate 180°
 - Flip horizontal
 - Flip vertical
- Added image editor start mode option to "Options" menu:
 - Normal window
 - Maximized window (Default)
 - Remember and use previous window size, position and maximized state
 - Fullscreen
- Added image editor background color option to "Options" menu
- Added cursor type option to cursor drawing tool
- Show image size, file name and FPS in image editor title bar
- Image editor last selected tool will be remembered separately from region capture
- Changed region capture/image editor resize node visuals
- Support proportional resizing when dragging resize node while holding `Shift`
- Added **QR code** decode support, which can scan multiple QR codes at the same time from screen or file
- Added "Upload text" to main window upload menu and as hotkey
- Added "Shorten URL" to main window upload menu and as hotkey
- Removed update button from custom uploaders tab because now settings apply instantly
- If custom uploader name field is empty then name will be generated automatically from request url, which is recommended for consistency
- Custom uploader won't export with empty request url or destination type
- While exporting custom uploader all default or empty values will be ignored, that way **JSON** output can be more compact
- Added custom URL sharing service support, which can be used for example for **Discord webhooks**
- Added **response syntax** to custom uploader which can be used in URL fields
- Added **random syntax** support to custom uploader request URL
- Added Text/URL input to custom uploader arguments/headers value suggestion list
- Renamed Picasa to **Google Photos**
- Removed dead uploaders: Someimage, Imgland, Minus, Uplea
- Added image effects preset list support, this will cause previous image effect settings to reset
- Added markdown copy options to main window task context menu

- Removed [Amazon S3](#) reduced redundancy storage option because it is now deprecated and even costs more than standard storage to encourage moving to standard storage
- Added [standard infrequent access storage](#) option to [Amazon S3](#)
- Hide notification window from `Alt + Tab` and `Win + Tab` menu  sylveon
- Implemented latest [paste.ee](#) API, this will cause previous authentication setting to reset
- Implemented latest [Flickr](#) API which is using OAuth for authentication now, this will cause previous authentication setting to reset
- Added direct link option to [Flickr](#)
- Updated [Lithio](#) to new API which is using username/password for authentication now instead of Steam OAuth
- Increased Twitter message character limit to 280
- [Windows Store ShareX build](#) is now using .NET Framework 4.6.1 so there is no need for additional executable to handle Centennial startup changes anymore  sylveon
- Touch input improvements for region capture  mghiasi75
- Watch folder feature will also check for file size multiple times to make sure that file is not being written before starting upload
- Added [ShareX Discord server invite link](#) to main window, you can press `x` button to permanently hide it
- Both Discord and Patreon buttons will be automatically hidden when main window task list is not empty
- Pressing `Esc` in quick task menu will close it
- Added verbose request logs option to application settings advanced tab which can be used to debug upload related issues
- Added drag and drop file from history window support  campbeb
- Support `Ctrl + A` in OCR results window  campbeb
- Main window image preview can now be positioned on the bottom  campbeb
- Removed https option for [Imgur](#) and instead always https will be used because now [it is used by default on Imgur](#)
- Show current version and latest version in update message box
- In application settings window middle mouse clicking on pre-release check box will download latest dev build from [AppVeyor](#) but it should be only used for testing purposes because dev builds can be unstable and therefore not recommended for production use
- Updated design of [ShareX web site](#) to have dark colors

ShareX 11.9.1 - 2017-08-14

- Bug fixes

ShareX 11.9.0 - 2017-08-06

- ShareX is now available on [Windows Store](#)!
- Added Italian language support  pjammo
- Added cursor tool to region capture which allows moving, deleting or adding more cursors
- Added multiple center point support to line and arrow tools
- Added arrows on both ends option to arrow tool
- Added batch image thumbnailer tool
- Added [random syntax](#) to custom uploader, which can be used to return random domain each upload
- Added custom domain support for [Azure storage](#)  Lego6245
- Added padding and border size option to text watermark
- Added unread counter to news button

ShareX 11.8.0 - 2017-07-04

- Added "News" button to main window which will show new updates or announcements
- If after capture task "Annotate image" is selected and there are no annotations applied in region capture, the annotation window will open automatically after region selection, which will allow users to annotate after region selection similar to previous ShareX versions
